

WHY KAHOOT!?

- Kahoot! allows you to create, play and share fun learning games, in classrooms and beyond.

CREATE:

- Kahoot! creates a social learning environment that encourages students to play learning games together.
- Go to create.kahoot.it to create your Kahoot! account.
- Click on My Kahoots then click on the "Make my first quiz" button.
- From there, follow the directions on the website. Remember you have the option of setting a different time limit and adding images to your questions.

PLAY:

- Play your kahoots in a group setting, like a classroom
- Players answer on their own devices, while games are displayed on a shared screen to unite the lesson (students use the Game Pin displayed on the shared screen to gain access to the quiz):
 - This encourages everyone to look up!
 - Students receive personal feedback as to how they're performing in relation to their classmates, but don't have to share it
 - Everyone gets the group feedback. You as the teacher can use it to adapt the situation based on how well the class is understanding the content
 - At the end of the game, you can download a Spreadsheet with all the data from the game, for formative assessment and adapt individual's learning to suit
 - The game encourages discussions between students about the content they're playing
